Corrigendum to “Estimation of maximal oxygen consumption and heart rate recovery using the Tecumseh sub-maximal step test and their relationship to cardiovascular risk factors” [Artery Research, Volume 18, Issue C, June 2017]

Alun D. Hughes*, Nish Chaturvedi

Institute of Cardiovascular Sciences, University College London, London, WC1E 6BT, UK

The authors wish to state that in the above the published article (10.1016/j.artres.2017.02.005), contained an error in Eq. (1)

The correct equation should be:

\[ \text{VO}_2\text{max}(M) \text{ [ml min}^{-1}\text{ kg}^{-1}] = 84.687 - 0.722 \cdot \text{HR}_{\text{post}} \text{ [bpm]}/2 - 0.383 \cdot \text{age [y]} \quad (1) \]

where \( \text{HR}_{\text{post}} \) is heart rate in beats per minute over the period 30–60 s following exercise.
